

Title: Dissemination of Data from the National Science Foundation's UV Monitoring Network

Gerhard Bernhard, Biospherical Instruments Inc.

Abstract: The NSF's Ultraviolet Spectral Irradiance Monitoring Network (UVSIMN) has measured solar UV radiation at seven locations since 1988. Data are available from the website www.biospherical.com/NSF and have recently also been submitted to:

- (1) the World Ozone and UV Data Center (WOUDC),
 - (2) the Cooperative Arctic Data and Information Service (CADIS), and
 - (3) the SeaWiFS Bio-optical Archive and Storage System (SeaBASS).
- These submissions will ensure the data's long-term preservation.
